Claim Constructions

Claim Term	**Construction**
"interactive link" "link"	computer code that (1) retrieves and presents applications and/or information stored at remote locations across the network when selected by an end user, and (2) includes facilities for restoring a particular user's previous operating states of the application as the application is re-presented at a user's computer. An interactive link cannot be a bookmark, cookie, shortcut, hyperlink or Internet address (URL) or use those elements to restore previous operating states
"previous operating state" (in construction of "interactive link")	must refer to a particular user's operating state and particularly to "modifications made to an application" by the user. See ECF 792 at 10 ("Accordingly, the Court finds that 'previous operating state must refer to a particular user's operating state and particularly to 'modifications made to an application' by the user.")
"computer program code" "program code"	"Computer Program Code" and "Program Code" have their plain meaning. However, a "web address" or "hyperlinks" cannot be "computer program code" or "program code"
"operating environment"	operating system, user interface, or hardware capabilities
Preamble to Claim 1: "In a network configured computer processing system having a plurality of client computers and a plurality of host computers, a method for delivering interactive links for presenting applications and information from remote sources on the network, the method comprising: . . ." Preamble to Claim 17: "A network configured computer processing system, comprising: . . ."	Preambles are not limiting.
"presentation information for presenting an application" "presentational information"	Plain meaning. No construction required.
"presenting applications"	presenting an interface enabling interaction with an application

Case No. 12-cv-03733-JST   1   Appendix L

Claim Term	Construction
"presenting the application" "presenting said invoked application" "presenting of the application"	
"presentation client program code" "presentation client"	platform independent software, running on a client computer, that can present remotely stored applications and that can transmit user input to remotely stored applications
"computer program code segments embedded with informational content stored at a second of said plurality of server computers"	instructions for a computer to execute embedded within informational content
"application"	a software program that executes specific tasks for an end user
